Summary

Software Engineer with a Bachelor's degree in Computer Engineering and expertise in developing web applications using React, Django, Flask, and MongoDB. Demonstrated success in hackathons, including a regional victory and a national finalist position. Proficient in data structures and algorithms, Proficient in data structures and algorithms, supported by hands-on internship experience that refined my coding and analytical abilities. Excited to contribute innovative solutions within a collaborative team environment.

Experience

Internship - Reliance Industries Limited *Silvassa*

December 2023 - March 2024

- Developed a web application during a three-month internship, enhancing practical skills in software development.
- Utilized various technologies, including HTML, CSS, .NET Web Forms, MS SQL, and Docker, to create efficient and user-friendly interfaces.

Description: The Shift Manager Logbook to systematically record materials entering the plant, tracking essential data such as weight, arrival and departure times, storage methods, employee handling, and safety information. This tool enhances operational efficiency and safety compliance.

Education

Bachelor of Technology in Computer Science and Engineering *Parul University*

12/2020 - 04/2024

Projects

Blogging Platform

- Developed a Django-based blogging platform with secure JWT authentication and role-based access control (RBAC) for admins and moderators.
- Enabled users to create, view, edit, and delete blogs, while admins manage content and user roles through a dedicated dashboard.
- **GitHub**: Blogging_Platform

Hotel-Management App

- Designed a comprehensive hotel management system using the MERN stack (MongoDB, Express, React, Node.js).
- Integrated APIs for seamless data transfer and enhanced user experience.
- Used MongoDB for database management and Express.js for backend routing.
- **GitHub**: Hotel-Management App

Stock-Market Prediction Web App

- Formulated a stock market prediction app with a React.js frontend and Python-based data analysis.
- Integrated real-time stock data for up-to-date market insights.
- **GitHub**: Stock-Market Web App

Expense Tracker CLI

- Created a Python-based command-line expense tracker for managing financial data.
- Enabled add, update, delete, and display functionality using a JSON-based storage system.
- **GitHub**: Expense_Tracker

Skills

- **Web Technologies**: HTML, CSS, ReactJS, ASP.NET, Django, FlaskAPI, NodeJS, FastAPI
- **Programming Languages**: Python, JavaScript, C#
- **Databases**: MySQL, MongoDB, PostgreSQL, SQLite
- **Technical Competencies**: Data Structures and Algorithms, Problem Solving, Object-Oriented Programming (OOP)

Key Achievements

- **Finalist**: Kavach National Level Hackathon (Ministry of Home Affairs)
- **Inter-College Hackathon Winner**: Parul University
- Solved **500+ coding problems on LeetCode**.
- Earned a **5-star rating in Python** on **HackerRank**.
